Bullhorn Platform

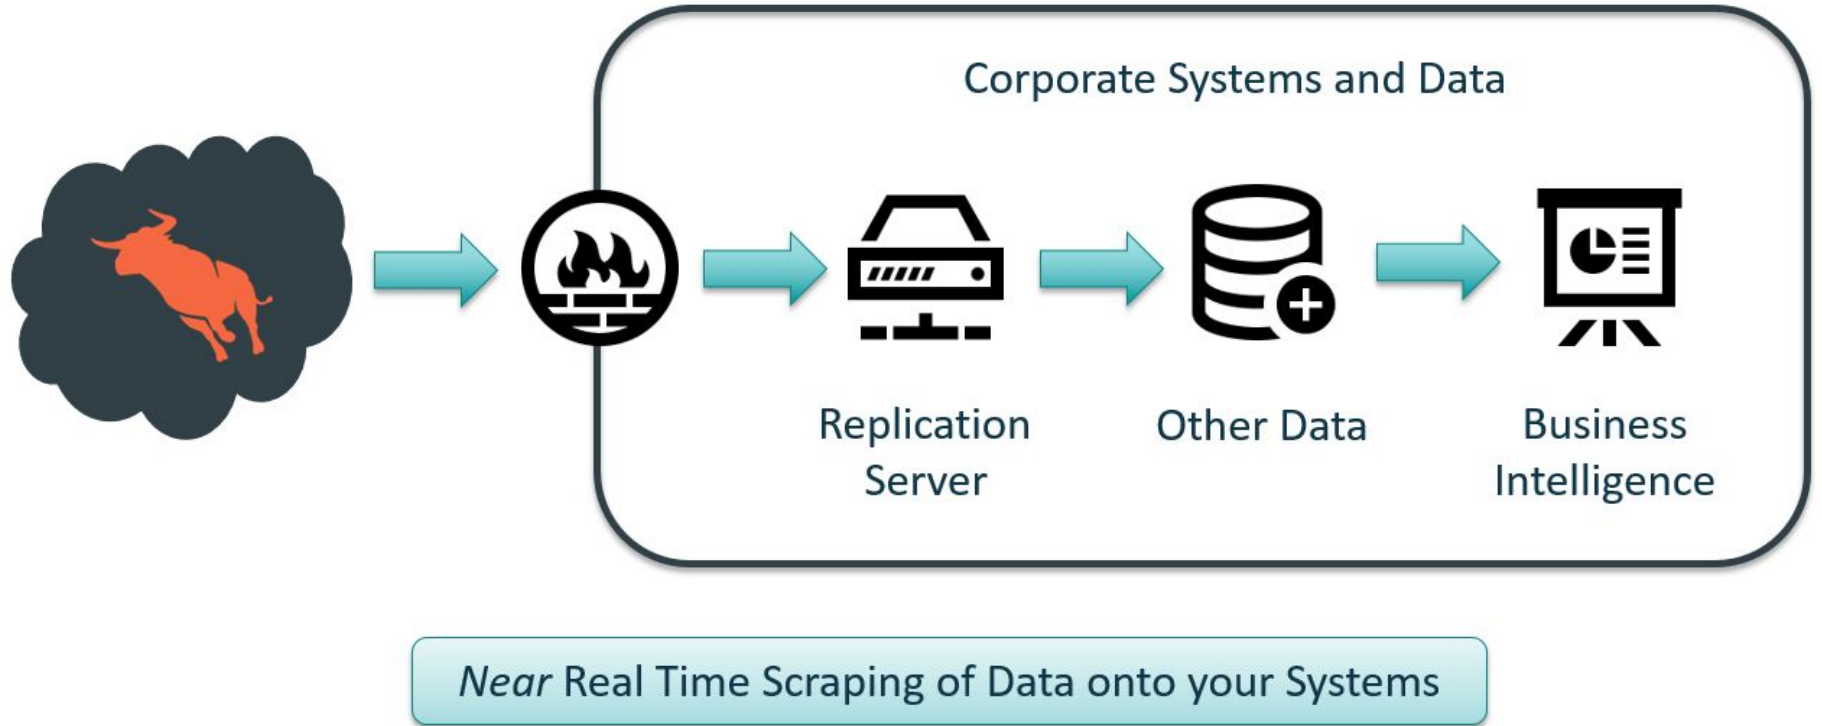

Speed Talks Part 2

Bullhorn Data Mirror

Nathan Dickerson

ENGAGE

Data Mirror: Your Data. Your Database.

Data Mirror Features

- Clone all of your data
- Nightly status reports
- You provide the server, we provide the software
- Updates are as simple as replacing a single file
- Support handles any issues

Career Portal

Charles Barnes / Adam Crowe

ENGAGE

Overview

Bullhorn Career Portal is the next-generation way to **SHARE JOBS** and **SOURCE CANDIDATES** from your Bullhorn ATS/CRM instance. Download, configure and host your own Career Portal, or fork the source code and make it your own.

Incredible Candidate Experience

- Takes less than 30 seconds to apply to a job
- Lightweight, extremely fast to load
- Data from candidate resume is searchable in database

The screenshot shows a job application interface. A modal form is open for the 'Lead IT Engineer' position, which is categorized under 'Architecture' and 'Contract'. The form contains the following fields:

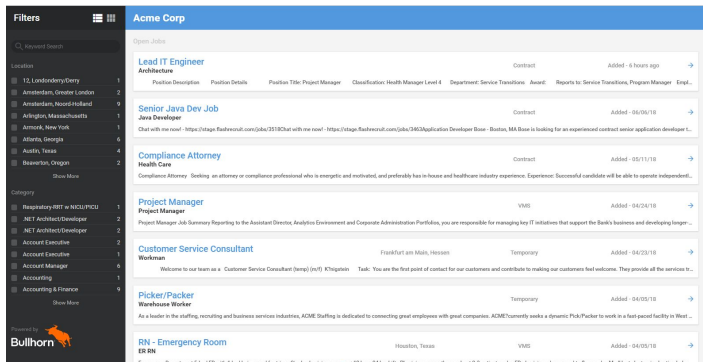

- First Name: * Frank
- Last Name: * Reynolds
- Email: * frank@frankthetank.com
- Mobile Phone (Optional):
- Resume File: A button labeled 'Attach Resume File' with an upload icon.

At the bottom of the modal are 'CANCEL' and 'SEND' buttons. In the background, a job listing card for the same position is visible, showing the title 'Lead IT Engineer', category 'Architecture', contract type 'Contract', and an 'APPLY' button. The card also indicates it was 'Added - 6 hours ago' and includes a link to 'View all jobs in this category'.

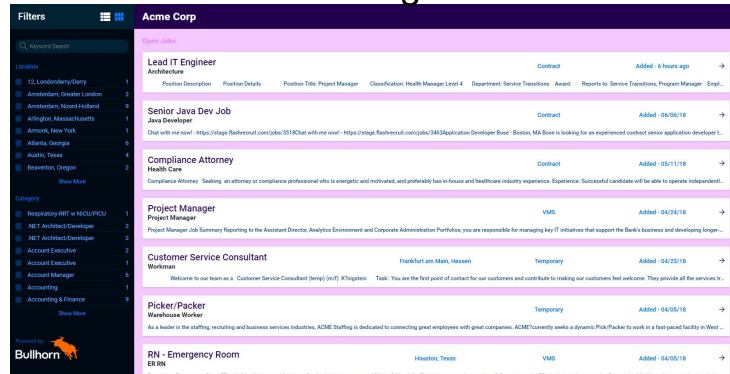

Customization

- Main style colors are in one file
- Code is grouped by component (Sidebar, List, Detail View)
- Additional guidance can be provided via GitHub

Before

After customizing index.scss

How do I get started?

Download

Source code is available
on GitHub.

Configure

Style your instance and
customize its
configuration.

Host

Upload the built app to
virtually any environment.

Extend

Fork the repo and be
creative.

Demo

Extension Starter Kits

Joshua Godi

ENGAGE

What are these starter kits?

Quick and easy projects that are meant to be forked to jumpstart your development. They have trivial and non-trivial examples to guide you through writing your own!

Two Types of Starter Kits

- Extension Starter Kits
 - Custom tabs / cards / apps
 - Planner / Credentialing / Canvas
- Extension Configuration Starter Kits
 - Field interactions, page interactions, BOTs
 - Professional Services
- Rest SDK Starter Kit
 - If Typescript isn't your thing :)

Where do they live?

- Extension Starter Kits
 - <https://github.com/bullhorn/extension-starter>
 - BONUS: <https://github.com/bullhorn/extension-samples>
- Extension Configuration Starter Kits
 - <https://github.com/bullhorn/extension-configuration-starter>

How do you use them?

- Step 1: Find the starter kit that suits you
- Step 2: Fork in into your personal Github
- Step 3: Develop!
- Step 4: Install into Bullhorn!

It's that simple! (crowd ooo's or applause)

Open Source

These projects are meant to be open source for everyone's benefit. If you see something you want to fix, improve or even want to add some new examples you can! Just open a PR and we will get it in!

The goal is here to make a friendly and helpful community around the Bullhorn Platform!

What is next?

- Update to Angular 6
- Add more complex examples
- Think of new places to utilize extensions in Bullhorn and add them!
 - We are open to suggestions! Find us at Engage and let us know!
